DETAILED ACTION

Response to Amendment

On 03/23/2010, applicant cancelled claim 4 and amended claims 1-3 and 5-9.

Objections and rejections of pending claims 1-3 and 5-9 are withdrawn in view of amendments and arguments.

Claims 1-3 and 5-9, a total of eight claims, are allowed.

Examiner's Reasons for Allowance

The following are Examiner's reasons for allowance:

Applicant's comments clarify the environment for his invention:

... case that a provider system has elements for the user authentication, the billing processing and a content database, a specific service level is assigned for the first provider system for the purpose of delivering only the order information, in such case, the return path management system delivers only the order information to the first provider system without performing the user authentication, the billing processing or updating of the content database when the order information received from the user television. Furthermore, in the case that a provider system has an element for the billing processing and the content database without an element for user authentication, a specific service level is assigned for the first provider system for the purpose of delivering the order information and processing the user authentication. In such case, the return path management system delivers the order information to the first provider system and performs user authentication without performing the billing processing or updating of the content database when the order information is received from the user television.

Additionally, Applicant's invention processes the order information differently than the data is processed in [prior art]. Applicant's invention as described in Claim 3 is directed to a communication packet delivered from the return path management system to the first provider system includes different information depending on the service level of the first provider system as described in amended Claim 3. in other words, a communication packet according to the first service level includes the order information; a communication packet according to the second service level includes the order information and user authentication information; a communication packet according to the third service level includes the order information, user authentication information and billing information; and a communication packet according to the fourth service level includes the order information, user authentication information, billing information and application-related information.

Applicant's comments and disclosures reveal that the system is defined as a to include hardware and software components. This is further evidenced by use of URL's, interpreted as requiring the use of WWW and its components.

The closest prior art, Gerzberg (6,452,923) neither anticipates nor renders obvious the combination, inter alia,

a return path server configured to receives order information from the user television, wherein the return path server determines a service level of a first provider system to which the received order information is to be delivered from the return path server by using the provider database, and performs selectively at least one of delivery of the order information, a user authentication process, a billing process and updating of the content database in response to the determined service level.

The closest non-patent literature is Bernard Bland, Local loop access bottlenecks: A tangled web, Global Telecoms Business. London: Feb 2000. , Iss. 45; pg. 38, downloaded from ProQuestDirect on the Internet on 06/20/2010, 7 pages. Bland, however, neither anticipates nor renders obvious the combination above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
